

## Wireless tablet interactivity from across the room

Windows®. Life without walls™. HP recommends Windows 7.

---

The HP Digital Sketch is the next generation interactive tablet, designed for the classroom or the boardroom. The lightweight and compact device lets you utilize all the functionality of a standard software application from almost anywhere in a conference room, classroom or large meeting space.

### **Capture the future as it happens**

Learning and great ideas take place in real time, and the HP Digital Sketch lets you capture them as they happen. Use the tablet with a PC on the surface of your choice. Connect the wireless pen and tablet through the included software, and a USB dongle receiver and you are ready to go. Navigate, create and interact by using one of the HP Software applications (included), and the Tablet Toolbar which features a range of frequently used commands.

The HP Digital Sketch also offers a unique dual input feature so you can simultaneously connect the tablet with an interactive whiteboard device like the HP Pocket Whiteboard. While someone is drawing the tablet, someone else at the board can use full mouse-functionality to drag in images, edit strokes, or set up a shared meeting.

### **All the tools you need**

Take advantage of the impressive range of tools available with the included software. Import multimedia including interactive Flash files, or select from a range of tools available online. The Digital Sketch can also interact with anything projected including the web or content you may choose.

### **Everything you need - wherever you need to be**

No matter where you are, the HP Digital Sketch lets you add interactivity to any classroom or meeting:

- Compact size and weight lets you take it almost anywhere
- Easily installs and syncs the tablet using the dongle receiver that plugs into a USB port
- Project onto a surface area of up to 9 x 5 ft.
- Encourages collaboration with free and secure network sharing
- Provides integration with PowerPoint
- Activates an area large enough to accommodate most projected images
- Fun and intuitive user interface
